CELL-PLUS® HIGH DEFINITION CREAM FOR ADVANCED STAGE CELLULITE

For cellulite* in the advanced phases with relaxed tissues

HOW IT WORKS

More resistant cellulite* is often accompanied by a loss of tissue firmness and skin imperfections, giving skin a “dimpled” appearance. An intelligent formula: Bios Line Laboratories have created an exclusive combinations of natural active ingredients to combat the causes cellulite* in the advanced phases. Alga Sphacelaria: helps to combat the appearance of imperfections due to localized fat deposits and loss of skin elasticity. Caffeine and Carnitine: promote the reduction of imperfections caused by localized fat deposits. Alga Aosa: improves skin elasticity. Slimming activator1: the effectiveness of the product is enhanced by an innovative marine extract (Crithmum Maritimum) that acts as an activator, acting on the active ingredients and increasing their slimming effect. Finally, the active texture, a special formulation created by Bios Line laboratories, promotes transport of the active ingredients and the effectiveness of the treatment with a short, pleasant massage. With daily use, this can help reduce the imperfections caused by localized fat deposits and firm tissues, helping improve the appearance of “dimpled skin”.
